

# Lecture 09: VMs and VCS head in the clouds

Hands-on Unix system administration DeCal

# Projects

## ❖ Projects

### Virtualization

### Head in the clouds

- groups of four people
- submit one form per group with OCF usernames, proposed project ideas, and one SSH *public* key
- virtualization infrastructure is in place: we'll create accounts and send out an announcement by Wednesday
  - ◆ needed for this week's lab

❖ Projects

## Virtualization

❖ What is virtualization?

❖ Virtualization is

❖ Why?

❖ Why not?

❖ Degrees of separation

❖ Process isolation

❖ Full virtualization

❖ Full virtualization cont'd

❖ More features

Head in the clouds

# Virtualization

# What is virtualization?

❖ Projects

Virtualization

❖ What is virtualization?

❖ Virtualization is

❖ Why?

❖ Why not?

❖ Degrees of separation

❖ Process isolation

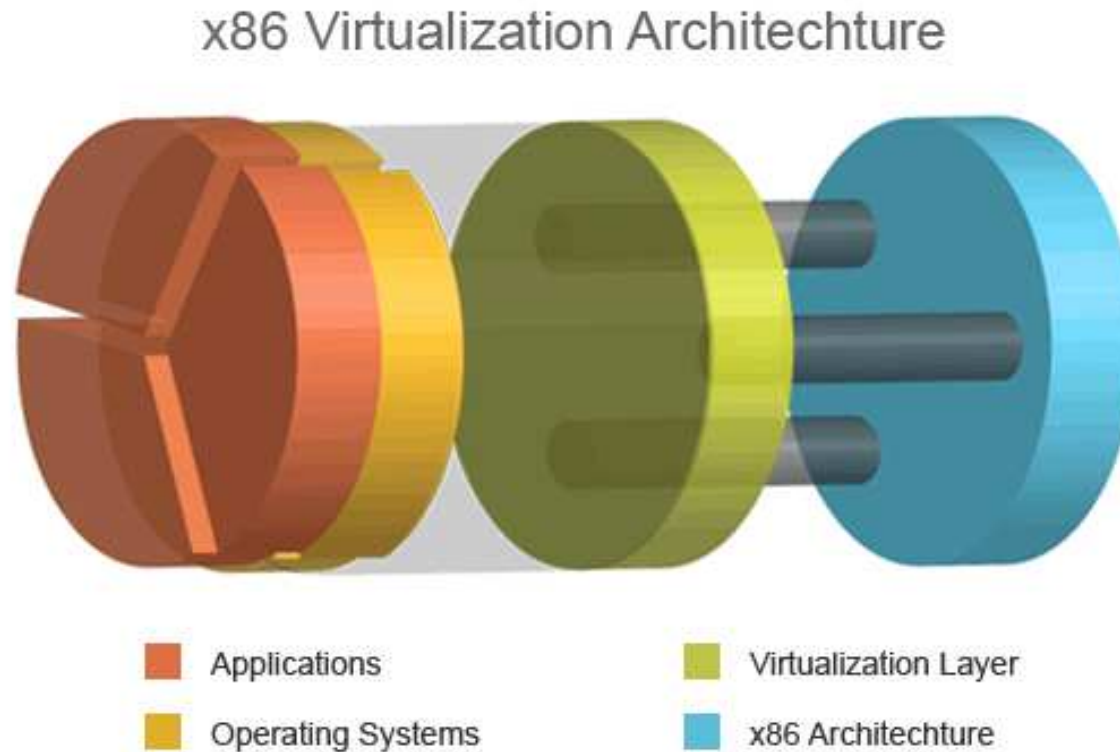

❖ Full virtualization

❖ Full virtualization cont'd

❖ More features

Head in the clouds

- predates Unix (IBM: 1964)

via <http://wowrack.com/images/misc/virtualization-architecture.gif>

# Virtualization is

❖ Projects

Virtualization

❖ What is virtualization?

❖ Virtualization is

❖ Why?

❖ Why not?

❖ Degrees of separation

❖ Process isolation

❖ Full virtualization

❖ Full virtualization cont'd

❖ More features

Head in the clouds

- multiple virtual machines (VMs) on one physical computer
- what is a virtual machine?
  - ◆ processes, memory, disk, network traffic, input/output devices?
- how thoroughly virtualized?
  - ◆ can it run any operating system that supports a specific architecture?

# Why?

## ❖ Projects

### Virtualization

❖ What is virtualization?

❖ Virtualization is

### ❖ Why?

❖ Why not?

❖ Degrees of separation

❖ Process isolation

❖ Full virtualization

❖ Full virtualization cont'd

❖ More features

Head in the clouds

- consolidation
  - ◆ increase hardware utilization
  - ◆ decrease power consumption
- compartmentalization (reliability, security)
  - ◆ separate services on different VMs
- abstraction (flexibility)
  - ◆ easily provision/destroy servers

# Why not?

❖ Projects

Virtualization

❖ What is virtualization?

❖ Virtualization is

❖ Why?

❖ **Why not?**

❖ Degrees of separation

❖ Process isolation

❖ Full virtualization

❖ Full virtualization cont'd

❖ More features

Head in the clouds

- single point of failure (reliability, security)
- restrictions on virtualized operating system
- performance impacts
- inadequate compartmentalization (security)
- licensing (\$)

# Degrees of separation

❖ Projects

Virtualization

❖ What is virtualization?

❖ Virtualization is

❖ Why?

❖ Why not?

❖ Degrees of separation

❖ Process isolation

❖ Full virtualization

❖ Full virtualization cont'd

❖ More features

Head in the clouds

- process isolation
  - ◆ one OS, many isolated user-space “containers”
- full virtualization
  - ◆ one *hypervisor*, many OSes on virtual “hardware”
- lots of gray area in between
  - ◆ one kernel, many OSes?

# Process isolation

## ❖ Projects

### Virtualization

❖ What is virtualization?

❖ Virtualization is

❖ Why?

❖ Why not?

❖ Degrees of separation

### ❖ Process isolation

❖ Full virtualization

❖ Full virtualization cont'd

❖ More features

Head in the clouds

- varying degrees of isolated use-space (CPU, memory, I/O, network)
- enhanced chroot
- low abstraction, low overhead
  - ◆ cannot run a virtualized OS
  - ◆ compartmentalization is limited
- implementations: Linux containers, OpenVZ (Linux), FreeBSD jails, Solaris zones

# Full virtualization

## ❖ Projects

### Virtualization

❖ What is virtualization?

❖ Virtualization is

❖ Why?

❖ Why not?

❖ Degrees of separation

❖ Process isolation

❖ Full virtualization

❖ Full virtualization cont'd

❖ More features

Head in the clouds

- thorough hardware architecture (e.g., x86) abstraction by *hypervisor*
- more overhead, (nearly) full compartmentalization
- virtualized OS need not be aware
- virtualized OS can be aware:
  - ◆ paravirtualization
    - ◆ one kernel, many OSes
    - ◆ “cooperative” drivers (e.g., virtio, “guest additions”)

# Full virtualization cont'd

## ❖ Projects

### Virtualization

❖ What is virtualization?

❖ Virtualization is

❖ Why?

❖ Why not?

❖ Degrees of separation

❖ Process isolation

❖ Full virtualization

❖ Full virtualization cont'd

❖ More features

Head in the clouds

- physical hardware (“bare metal”) need not be aware
- physical hardware can be aware: hardware-assisted
  - ◆ VT flag on modern processors
  - ◆ often necessary for decent performance
- implementations: qemu/KVM, VirtualBox, VMware, Hyper-V

# More features

❖ Projects

Virtualization

❖ What is virtualization?

❖ Virtualization is

❖ Why?

❖ Why not?

❖ Degrees of separation

❖ Process isolation

❖ Full virtualization

❖ Full virtualization cont'd

❖ More features

Head in the clouds

- teleportation: migration of VMs between hypervisors
  - ◆ live vs. offline
- snapshots of state
  - ◆ live (RAM include) vs. offline (only disk, e.g., logical volume)
- automation?

## ❖ Projects

### Virtualization

#### Head in the clouds

- ❖ What is the cloud?
- ❖ Business as usual
- ❖ Cloud computing is
- ❖ Examples
- ❖ IaaS
- ❖ Paradigm changes
- ❖ Amazon Web Services

# Business as usual

❖ Projects

Virtualization

Head in the clouds

❖ What is the cloud?

❖ **Business as usual**

❖ Cloud computing is

❖ Examples

❖ IaaS

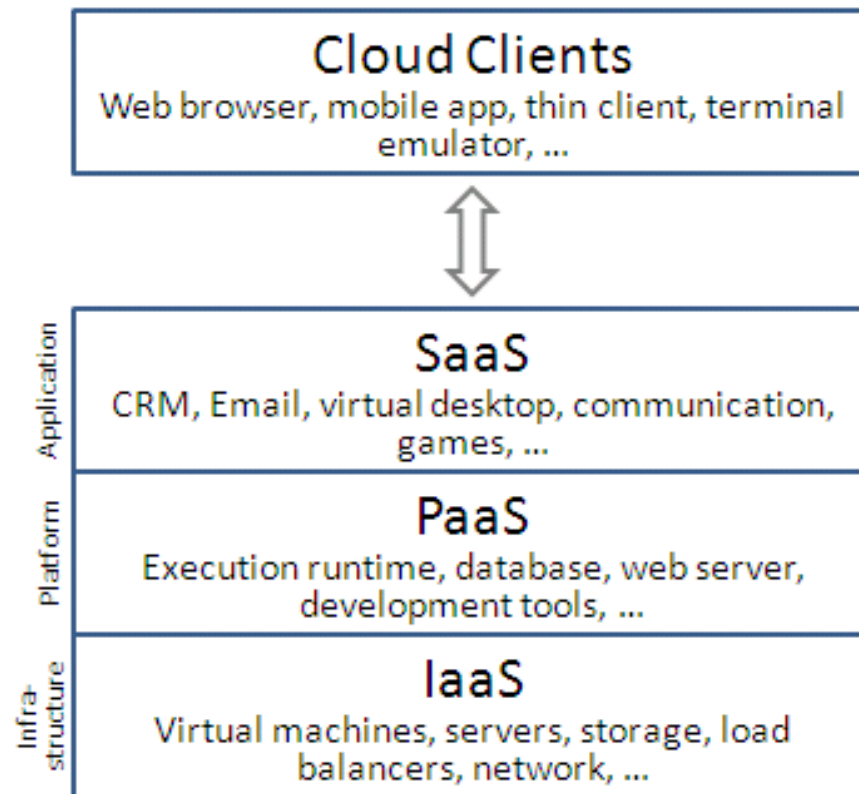

❖ Paradigm changes

❖ Amazon Web Services

- economies of scale: pool labor and material resources
  - ◆ pay recurring costs (rent, utility price) vs one-time costs (equipment, software license)
  - ◆ “outsource” enterprise computing for speed and maintenance
- Big Brother?

# Cloud computing is

- computing resources delivered over a network (Internet)

### Virtualization

### Head in the clouds

❖ What is the cloud?

❖ Business as usual

❖ Cloud computing is

## ❖ Examples

❖ IaaS

❖ Paradigm changes

❖ Amazon Web Services

- Software as a Service (SaaS)
  - ◆ Google Apps, iCloud, Dropbox/Box, ?
- Platform as a Service (PaaS)
  - ◆ Heroku, Google App Engine
- **Infrastructure as a Service (IaaS)**
  - ◆ Amazon AWS (e.g., EC2), Rackspace Cloud, Microsoft Azure

# IaaS

❖ Projects

Virtualization

Head in the clouds

❖ What is the cloud?

❖ Business as usual

❖ Cloud computing is

❖ Examples

❖ IaaS

❖ Paradigm changes

❖ Amazon Web Services

- virtualization on large scale
  - ◆ data centers of hypervisors
  - ◆ image, device (block), file storage
  - ◆ virtual LANs (VLANs), firewalls
- on demand scaling

# Paradigm changes

❖ Projects

Virtualization

Head in the clouds

❖ What is the cloud?

❖ Business as usual

❖ Cloud computing is

❖ Examples

❖ IaaS

❖ **Paradigm changes**

❖ Amazon Web Services

- instance storage
- load balancing
- rapid deployment, centralized management

# Amazon Web Services
